Re: Part 117 Definition of “duty” and Activities during Commuting

Dear Mr. Carbone:

Thank you for your August 31, 2018, request for legal interpretation. You ask for clarification of the July 3, 2018 DeLancie letter.¹ Mr. DeLancie wrote to the FAA requesting interpretation of the 14 CFR part 117 definition of “duty” in the context of an air carrier requiring an employee to perform certain activities while commuting in exchange for commuting privileges, including “providing aircraft janitorial services, cleaning aircraft toilets, assisting with cabin baggage loading, or preparing the cabin for another flight.” Mr. DeLancie’s concern was that such practices circumvented the FAA’s definition of “duty” and were “an instrument of coercion into involuntary work since most airline pilots rely on non-revenue privileges in order to report to their domicile for flight duty.”

In the FAA’s response to DeLancie, we noted that when a pilot voluntarily uses commuting privileges, that is not considered “duty.” However, we also cited several previous letters of interpretation holding that duty is all actual work for the certificate holder, even if characterized differently, and may include preflight and post flight activities, because those activities can contribute to fatigue which could interfere with the ability to safely perform assignments.²

You indicate that commuting is a privilege, and as a result all JetBlue employees are required to assist in “light cleaning” of the aircraft. You emphasize that this cleaning “consists solely of...folding seatbelts and removing refuse from seats and the seatbacks” which “can take approximately five to ten minutes.” Your position is that since commuting is not part of the duty period, a pilot who voluntarily commutes on JetBlue would not be on duty simply because of the expectation that he or she engages in “de minimus acts such as seat belt crossing” in order to maintain commuting privileges. You contend these circumstances are distinguished from the circumstances of the 1992 Laurenzano and 2013 Ewing letters of interpretation, where the FAA clarified that when a flightcrew member is

¹ We note that the FAA does not publish closeout letters; however, this letter was shared with members of the aviation community in such a fashion that it came to the requester’s attention.

² Letter of Interpretation to Laurenzano from Donald P. Byrne, Assistant Chief Counsel, Regulations and Enforcement Division (Apr. 8, 1992); Letter of Interpretation to Morris from Rebecca B. MacPherson, Assistant Chief Counsel, Regulations Division (Apr. 29, 2005); Letter of Interpretation to Ewing from Mark W. Bury, Assistant Chief Counsel for International Law, Legislation, and Regulations (Jan. 13, 2014).

required to be on call, the flightcrew member is on duty and not on rest because he or she is not free from all restraint. You also maintain that unlike the 2005 Morris letter of interpretation, where the FAA was concerned that required ground duties might contribute to fatigue and thus constitute duty, here the “light cleaning” is no more fatigue-inducing than the act of commuting itself, or “donning one’s uniform, checking one’s schedule, [or] checking in[.]”

Before beginning its analysis, the FAA notes that the circumstances discussed in this letter are ripe for labor-management issues. The FAA expects these issues to be addressed as part of the employer-employee relationship. In so far as the FAA takes a position, it is solely to address fatigue mitigation through the application of part 117.

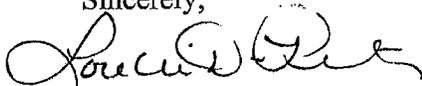

The FAA welcomes the opportunity to clarify its position on activities required during commuting with the benefit of both flightcrew member and air carrier perspectives. The FAA reiterates its position in DeLancie that commuting is not considered duty because it is voluntary in nature and not required by the certificate holder. However, the FAA is also aware that while commuting is voluntary, if an employee does not comply with a carrier’s requirement that he or she perform certain activities while commuting, it may result in the loss of non-revenue transport privileges on which many airline pilots rely.

In addition to considering whether the activity is required or voluntary, as discussed in DeLancie, the FAA is also concerned with whether the activities required of an employee during his or her commute may contribute to an employee’s fatigue level. In a previous letter of interpretation (Morris 2005) the FAA determined that a flight attendant’s airport ground activities should be included in “duty” because they could lead to fatigue that would interfere with the flight attendant’s ability to safely perform cabin safety assignments.

Part 117 identifies the risks of flightcrew member fatigue to the traveling public and takes a systemic and flexible approach to mitigate those risks. Therefore, while the FAA does not consider “de minimus” cleaning or other light activities that are required during commuting to constitute duty, there may be circumstances where the activities required of the commuting employee may rise to a level where they significantly contribute to fatigue that could affect a flightcrew member’s safe performance and thus constitute duty. (For example, baggage handling, strenuous cleaning, or activities more extensive than can be completed in a short period of time).

We appreciate your patience and trust that the above responds to your concerns. If you need further assistance, please contact my staff at (202) 267-3073. This letter has been prepared by Sarah Yousaf, Operations Law Branch, Office of the Chief Counsel and coordinated with the Air Transportation Division of Flight Standards Service.

Sincerely,

Lorelei D. Peter

Assistant Chief Counsel for Regulations, AGC-200
